NEW RANGE

A word of thanks from **Kelly Freeman**

Every day, our team of almost 4,000 Nutrien Ag Solutions professionals have the privilege of working closely with incredible farm businesses across Australia. As trusted advisors, we take pride in improving outcomes for our customers and the wider Australian ag industry.

The Nutrien Rewards Program is our way of saying thank you for your continued loyalty and support. As we head towards the end of the year, now is a great time to explore the range of rewards on offer. Whether it is something to support your farm business, family, lifestyle, or to pass it forward by making a donation to one of our selected charities, there is plenty to choose from.

We know you have a choice where you procure your goods and services, and the Nutrien Ag Solutions team will continue to work hard every day to earn your business and help you continue to improve the productivity, profitability, and sustainability of your business.

We're very grateful for your continued loyalty and support as we go further for Australian agriculture.

Kelly Freeman

2024 USA STUDY TOUR

ADAMA and Nutrien Rewards would like to invite you on a study tour to the USA!

We will be taking the top 8 customers* and a partner to tour the USA in September 2024! For your chance to join the tour, simply purchase any ADAMA product from a Nutrien branch between 1st June 2023 and 31st May 2024.

Good luck, and have a great season.

Grilled Veggie Skewers & Ribeye Steak with Herb Butter

Elevate your BBQ experience with this recipe that beautifully brings together the indulgence of ribeye steaks with the freshness of grilled veggie skewers.

INGREDIENTS

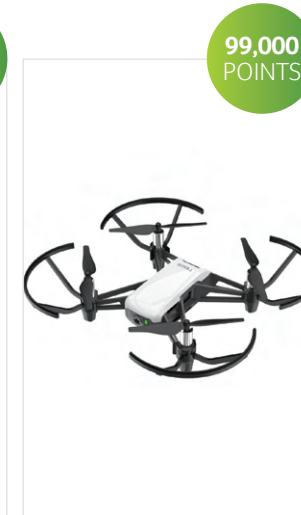

- 2 ribeye steaks (1 inch thick)
- Assorted vegetables (Capsicum, zucchini, red onion, cherry tomatoes)
- 4 tablespoons olive oil
- 1/2 cup unsalted butter, softened
- 2 tablespoons chopped fresh parsley
- 1 tablespoon chopped fresh thyme
- 1 tablespoon chopped fresh rosemary
- 4 cloves minced garlic
- 1 teaspoon dried oregano
- 1/4 cup balsamic vinegar
- Salt and pepper to taste
- Wooden skewers, soaked in water

- 1. Prep Steak and Herb Butter:** Rub each ribeye steak with olive oil and season both sides with salt and pepper.
- 2. Prepare Herb Butter:** Mix softened butter with parsley, thyme, rosemary, garlic, salt, and pepper. Set aside.
- 3. Prep Veggies:** Wash, peel (if needed), and chop assorted vegetables into manageable sizes.
- 4. Preheat the Grill:** Preheat grill to medium-high heat.
- 5. Marinate Veggies:** In a bowl, combine balsamic vinegar, olive oil, garlic, oregano, salt, and pepper for the veggie marinade. Toss veggies in marinade, ensuring they're coated. Marinate for 15-30 minutes while prepping the grill.
- 6. Two Step Grilling for Steak:** Sear steaks. Grill for 2-3 minutes per side over high heat for grill marks and crust. Move to slightly cooler area, grill 4-6 minutes per side.
- 7. Grill the Veggies:** Assemble marinated veggies on soaked skewers. Grill for 10-15 minutes, turning occasionally.
- 8. Serve:** Serve herb butter-topped steaks alongside grilled veggie skewers.

Nutrien Community Grants program

Nutrien Ag Solutions works in partnership with our communities to support them at a local level, in ways that best suit the individual needs of that community.

We also create impact at scale through our coordination of national programs that deliver on our promise to go further for Australian farmers and their communities. Since the launch of the Nutrien Ag

Solutions Community Grants program in 2021, 110 projects have been supported by awarding \$504,333 in grants to rural and regional communities across Australia. In partnership with the Foundation for Rural and Regional Renewal, the Program contributes to the success, vibrancy and well-being of these communities.

NEW OPTI PHIL

Philmac
The connection you can trust.

High performance, compact float valve, saving pump life and energy

Scan to find out more about OptiPHIL

**Soft-Close
design prevents
damaging water
hammer**

PHI1421-08/23

The new Philmac OptiPHIL float valve

The new Philmac OptiPHIL float valve is a high performance, compact, float valve for large and medium troughs with high demand. This full flow float valve provides flow of up to 847 L/min at high pressure and flows of 287 L/min @ 100 kPa, making it very adaptable in a wide variety of applications.

The Research and Development team at Philmac have designed innovative new features into the OptiPHIL float valve that have dramatically improved the function of this style of valve.

Minimising float bounce being one of them, you don't want your float bouncing in turbulent water in the trough creating false shut offs that can cause damage to fittings and ruin pumps. The team at Philmac have developed the unique Smooth-Flo outlet design which optimises water flow, reduces turbulence, minimising float bounce. When combined with the patented soft-close technology which prevents water hammer and provides a reliable shut-off every time saving wear and tear on your pump and pipe systems.

The valve is also designed with the patented Opti-Flo technology, which optimises water flow through the valve to help prevent blockages and improve performance in dirty water.

Combine all these features with the patented soft-close technology that prevents damaging water-hammer and you have the ultimate in float valves.

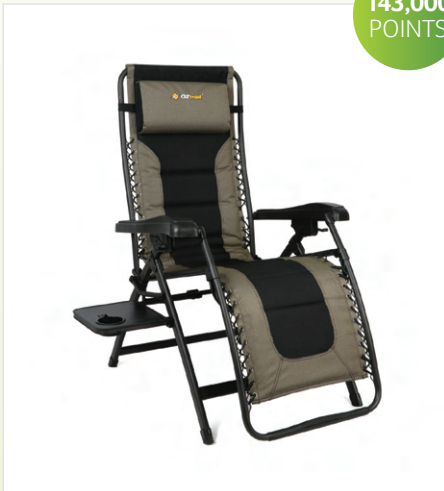

So what's in the box? The Philmac OptiPHIL float valve comes pre-assembled with a standard 1" BSP tapered male thread. To cover other common inlet sizes and underwater installations, OptiPHIL is supplied with 3/4" and 1-1/4" thread adaptors and an underwater kit, which consists of a float cord and anti-tangle tubing. All this means installation is fast and easy. If you do need to adjust the water level in the trough it's as simple as loosening a screw on the arm that holds the 4" high-vis float and then retightening.

CareFlight Emergency Trauma Training

Every minute counts at a traumatic incident, and those minutes are even more precious when medical services are hundreds of kilometres away in rural and regional Australia.

In 2022, we launched our partnership with CareFlight to upskill regional communities with life-saving skills in 180 locations across Australia. The Emergency Trauma Training will deliver training that's practical and targeted to those working in the agriculture industry.

The courses build participants knowledge, skills and confidence that improve long-term patient outcomes and build resilience in communities. Taught by clinical professionals, the course is a hands-on mix of theoretical and simulation-based trauma response training.

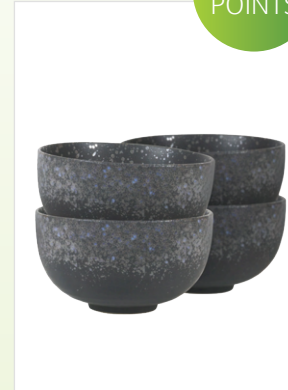

The first workshops took place in 2023 and will continue over the next three years.

Air Fried Mexican-Style Chicken Cutlets

The combination of flavorful spices in the chicken and the vibrant corn salsa will give your dish that delicious Mexican flair. Enjoy your tasty and vibrant meal!

INGREDIENTS

For the Chicken:

- 2 boneless, skinless chicken breasts
- 1 cup panko breadcrumbs
- 1 teaspoon chili powder
- 1 teaspoon cumin
- 1/2 teaspoon garlic powder
- Salt and pepper to taste
- 1/4 cup all-purpose flour
- 1-2 eggs, beaten
- Avocado or olive oil spray

For the Corn Salsa:

- 1 cup corn kernels (fresh, canned, or frozen)
- 1/4 cup diced red onion
- 1/4 cup diced capsicum (any color)
- 1 small tomato, diced
- 1 jalapeño, seeded and finely chopped (adjust to taste)
- Juice of 1 lime
- Fresh cilantro, chopped
- Salt and pepper to taste

1. Preheat your air fryer to 190°C for about 5 minutes.
2. Mix panko breadcrumbs, chili powder, cumin, salt, and pepper in a dish. Place the flour in a separate shallow dish and the beaten eggs in another shallow dish.
3. Butterfly the chicken breasts and then cut them into smaller pieces if needed for even cooking.
4. Dredge chicken in flour, dip in beaten eggs, then coat it with the panko mixture, pressing gently to adhere.
5. Place the coated chicken cutlets in a single layer in the air fryer basket. Lightly spray with cooking spray to allow for crispy texture.
6. Cook the chicken cutlets in the air fryer at 190°C for about 20 minutes, flipping them halfway through the cooking time, until golden brown.
7. While the chicken is cooking, prepare the corn salsa. In a bowl, combine the corn kernels, red onion, capsicum, tomato, jalapeño, lime juice, chopped cilantro, salt, and pepper. Mix well to combine.
8. Once the chicken cutlets are cooked, remove them from the air fryer and let them rest for a couple of minutes. Serve the Mexican-style chicken cutlets with the corn salsa on top or on the side.

AUSTRALIA'S NO.1 SPIKE HERBICIDE.

AUSTRALIAN
THROUGH
& THROUGH

From Improving annual ryegrass control (Including populations with weak levels of glyphosate resistance) in tank mixes with non-selective herbicides through to its proven results on other notoriously hard-to-kill weeds, Nufarm's Terrad'or outperforms many other Group 14 spike herbicides.

Rigorously field tested in Australian conditions, Nufarm's Terrad'or, gives growers the edge they need to assist in managing glyphosate resistance. It is a valuable tool when it comes to controlling problem weeds like marshmallow, sow thistle, wild radish and annual ryegrass. Get noticeably faster and better results with Nufarm's Terrad'or.

For more information, contact your local Nufarm Business Development Manager

nufarm.com.au/terrador

Nufarm Terrad'or: the only Group 14 spike you need

In barely two years on the market, Nufarm's Terrad'or has become Australia's number one spike herbicide. Terrad'or is a 700g/kg formulation of tiafenacil. Since launching in 2021, it's gained a name as the next generation of Group 14 herbicides, thanks to its performance on notoriously hard-to-kill weeds.

The results speak for themselves, according to Rachel Minett, Agronomist for Nutrien Esperance in WA. "We've used Terrad'or quite a fair bit this year in our knockdown sprays and summer sprays and we're really, really happy with how it's going so far," said Rachel. "It's been very effective on the larger, harder-to-kill broadleaf weeds such as marshmallow, fleabane and milk thistle. Ideally, we do a double-knock for marshmallow, but that's not always the case, so adding a really good-quality Group 14 spike in the mix has certainly helped with control." Control tough weeds and manage resistance

Terrad'or's activity on grasses, particularly control of low to moderate glyphosate resistance in ryegrass, is one of its biggest advantages for growers. "We experimented with Terrad'or at a 40g rate pre-barley last year," said Rachel. "Along with marshmallow in the paddock, we had milk thistle and we had some one- to two-leaf ryegrass as well. We added Terrad'or in the

paraquat pass just to see if we got improved brownout and speed of brownout, which I think we did. We were very comfortable with the results," she said.

Short plant-backs and flexibility put Terrad'or ahead of the pack Terrad'or's flexibility sets it apart from the competition, particularly for growers of cereals and pulses, with no residual activity and one-hour plant-backs for wheat, lupins, lentils, sorghum, barley, faba beans and chickpeas, as well as a one-week plant-back for canola at a 15g/ha rate. This versatility, along with the fact that it's an excellent mix partner with both paraquat and glyphosate, means Terrad'or is the only Group 14 spike growers need in the shed.

"I think it will replace some of the other Group 14 products," said Rachel. "I rate it as good as the competing Group 14 spikes but without the plant-back constraints. You just have greater flexibility with where you can use it. [I'd recommend] using it pre-seeding canola and wheat - I'd definitely be pushing it in that space. It's cost effective without any associated plant-back constraints so it's a good fit."

For further information about Terrad'or, a comprehensive technical guide is available on the Nufarm website.

The 2,4-D you can apply with confidence

COLEX-D®

HERBICIDE

Colex-D® is a next generation, patented 2,4-D technology that offers the robust weed control of traditional products with the added benefit of field proven Drift Reduction Technology (DRT), near-zero volatility, and ultra-low odour.

By using Colex-D®, you can be confident that you are doing the right thing by your farm, your neighbour and your community.

To find out more, contact your Territory Sales Manager on 1800 700 096 or visit corteva.com.au

Visit us at corteva.com.au

®/™ Trademarks of Corteva Agriscience and their affiliated companies. Always read and follow label directions. ©2023 Corteva. August 2023. FR10718.

Novel Colex-D technology changes the face of 2,4-D

Corteva Agriscience has long recognised the benefits and strengths of 2,4-D as a herbicide. With its robust broad-spectrum activity on some of the most important hard to kill weeds, it is well justified as a vital tool for fallow management. However, for many farmers, the use of current 2,4-D products is becoming increasingly difficult to maintain due to the proximity of 2,4-D sensitive crops and restricted use areas.

Colex-D® is a next generation, patented technology developed by Corteva with the drift management refined through a collaboration between Corteva and several North American Universities dating back to 2007. Colex-D is a novel form of 2,4-D which offers all the performance and efficacy of traditional 2,4-D products, but has field proven Drift Reduction Technology (DRT), near-zero volatility and ultra-low odour built in.

The proprietary drift reduction technology in the Colex-D formulation is designed to eliminate droplets at the finer end of the spectrum, and generate more optimally-sized droplets. This maximises product performance and minimises the risk of off-target movement. When Colex-D is applied according to the label, it offers an improved droplet spectrum which ensures the herbicide reaches the target weed.

While traditional 2,4-D amine formulations break apart in the spray tank resulting in more volatile components, the novel choline salt in Colex-D stays associated and is much more stable in the spray solution and on the sprayed surfaces following application”.

Corteva trials demonstrate that this novel choline salt formulation reduces 2,4-D losses due to volatility by more than 86% when compared with the amine salt form. Testing has shown that 2,4-D amine can volatilise from a sprayed surface 12 hours after application. Applying Colex-D gives farmers greater confidence that the risk of off-target movement and potential damage is reduced after spraying.

Additionally, the patented formulation and refined manufacturing process of Colex-D has produced an ultra-low odour product making mixing, handling and application a more pleasant experience for the applicator and the community.

The importance of fencing farm dams

Mark and Jacqui Schmidt were one of last years' recipients of the Gallagher Landcare Electric Fencing Grant. Their farm in Yackandandah, VIC, needed dam fencing to create a buffer zone for water filtration that allows their livestock to consume clean water, convert feed, and improve their performance overall. Using the grant, Mark and Jacqui have used a combination of Gallagher fencing products to fence the waterways on their property.

Fencing dams is a cost-effective and easy way to increase livestock productivity and biodiversity on-farm. Gallagher Business Development Manager for Fence, Graeme Mulligan, is particularly knowledgeable of the benefits of fencing farm dams; his fathers' farm saw an immediate weight gain increase in his sheep by fencing their dam and improving the quality of their drinking water.

In an area with lots of trees and where their cattle were grazing, they used Gallagher Insulated Line Posts (ISPs) and braid around their dam. As a semi-permanent solution, this allows them to easily fix the fence if a branch falls on it, or if one of their animals decides to challenge the fence.

The benefits of increasing the quality of water on-farm are huge. Often there is a resistance to fence around dams, as it reduces the available grazing area for livestock, however, up to 17% of your land mass can be fenced for the purposes of a dam filtering zone without losing any on-farm productivity. Healthy water = healthy livestock.

They were able to install the fencing themselves, and with the ISP's holding fast in the ground, the fence hasn't moved despite heavy rainfall in the area. Mark and Jacqui were able to build this fence around existing fencing, maintaining their existing paddock sizes without changing any of their infrastructure.

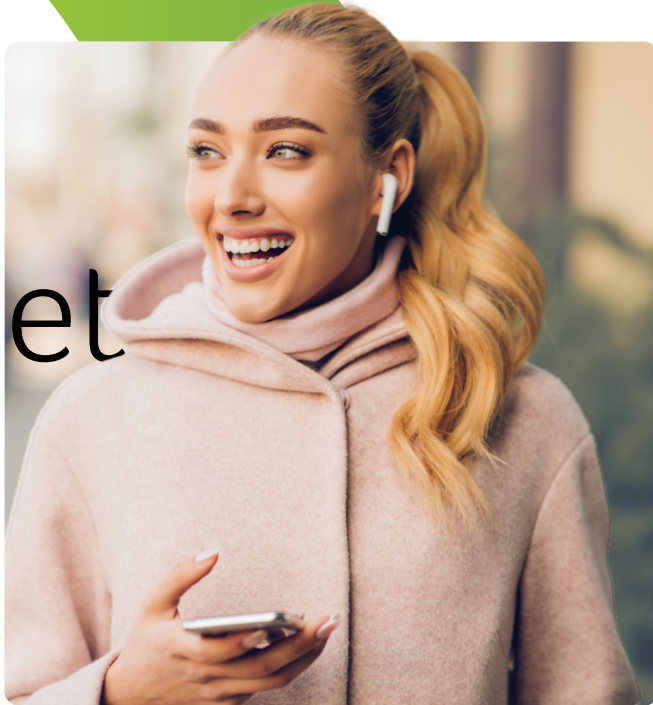

The Gallagher Landcare Electric Fencing Grant aims to support Australian farmers in their environmental conservation and feral animal exclusion projects. Applications for this year's grants have now closed but keep an eye out for further information on next year's grants on both the Landcare and Gallagher websites.

You can't manage what you don't measure

Gallagher Animal Performance & Traceability solutions make collecting information and handling animals safe, simple, and efficient, leading to higher on-farm productivity.
