GOING FURTHER FOR AUSTRALIAN FARMERS

Nutrien Ag Solutions has the specialised knowledge and resources to take your business further.

Visit your local branch today or discover more online at NutrienAgSolutions.com.au

A word of thanks from Kelly Freeman

At Nutrien Ag Solutions, we're always looking at opportunities to help you achieve success in your business. That's why we're continuing to improve your interactions with Nutrien, both in-branch and when you're at home.

I also encourage you to explore the great range of rewards on offer through the Nutrien Rewards Program. With rewards to support your farm and business, family or lifestyle, there's plenty to choose from. Use your available points, or Points + Pay to redeem your rewards even sooner.

We know you have a choice when it comes to sourcing your agricultural products and services. We're continually grateful for your loyalty and support as we go further for Australian agriculture in 2024.

Kelly Freeman

AXIAL® XTRA FORMULATION: AN EVOLUTION OF PINOXADEN

While there are cheaper Pinoxaden products available, for a little more the advantages really stack up with AXIAL® Xtra, for post-emergent control of wild oats, Phalaris and other grass weeds in wheat and barley.

Active ingredient Pinoxaden, remains a highly valuable tool for the management of wild oats and phalaris across wheat and barley production systems, Australia wide.

While we have seen cheaper formulations become available, **AXIAL® Xtra** herbicide is a step up in efficacy and ease of use, according to Syngenta Senior Product Lead, **Garth Wickson**.

"In a sense, there's little in common between AXIAL® Xtra and other Pinoxaden formulations," Mr Wickson said.

"Having discovered and developed Pinoxaden, we've moved on from the old generation of AXIAL®, which would be a fairer comparison to 100EC formulations.

"AXIAL® Xtra includes the latest adjuvant technology for enhanced performance." Mr Wickson said growers have observed several advantages.

"AXIAL® Xtra has superior compatibility with other foliar products you would commonly want to apply in crop, including broadleaf herbicides, fungicides and insecticides, to foliar nutrients," he said.

"Our built-in adjuvant also supports superior Pinoxaden uptake within the target, which creates that faster, more consistent burn down of weeds."

Syngenta Learning Centres are conducted every year across Australia, well attended by Nutrien Ag Solutions agronomists who make their own assessments of these products, placing them on the front foot to support farmers with new tools and products.

Mr Wickson said the process of discovery to first sales of a new product often took 10 years, sometimes longer.

"Our teams of scientists spend untold hours in the lab optimising every new formulation based on tests inside our greenhouses and at trial sites across Australia," he said.

"In comparison, our tests of other Pinoxaden formulations have found significant issues with active ingredient degradation, formulation crystallization and emulsion issues, which lead to reduced weed efficacy and general frustration on-farm."

Visit [syngenta.com.au/axialxtra](https://www.syngenta.com.au/axialxtra) to learn more about the extra benefits of **AXIAL® Xtra** and see what work goes into the development of Syngenta formulations.

IMTRADE
CropScience
Agriculture Reimagined

IMTRADE LEADS THE WAY IN BAITING TECHNOLOGY

It has been four years since Imtrade CropScience released its dual baiting system, **Transcend[®], which combines new molluscicide and insecticide technology.**

Imtrade CropScience's National Broadacre Category Manager John Barbetti said he could not be more pleased with the product.

"Metakill, our snail and slug bait, already had a strong customer base, so **Transcend**[®] has offered additional value to existing customers whilst also opening up new markets for those just chasing other pests."

Mr Barbetti said the dual bait controls snails, slugs and a range of insect pests, and is a testament to Imtrade's research and development efforts to fill a gap in the bait market. It was also a more comprehensive and cost-effective solution for growers – as heavy losses to emerging field and fruiting crops can be caused by arthropods like slaters, earwigs and millipedes in addition to the more obvious slug and snail damage most often noticed by farmers.

The weather resistant **Transcend**[®] bait also offers a vast improvement in the protection of beneficial insects over a boom or aerial applied broad-spectrum insecticide.

"**Transcend**[®]'s registration now extends to a range of horticulture cropping situations – including use in grapevines – and has been widely adopted by growers broadly across Australia," Mr Barbetti said.

A better type of bait

"We've been in the bait market for 20 years, starting out with a bran-based, low-concentration metaldehyde formulation, but discovered over time that effective control required more baits per square metre, higher active concentration and durability. Our research findings drove us to develop a solution for insect, snail and slug control in a single bait," he said.

"To maximise control, growers and agronomists need a quality bait, longevity in wet and dry conditions, high palatability to target pests and high efficacy. These combined attributes allow a single bait to deliver an effective lethal dose multiple times." Mr Barbetti said the bait dimensions and application rate are key to maximising likelihood of encounter, especially with snails and slugs, but also other pests.

A REWARDING WAY TO GROW

Nutrien Rewards is all about making it easy to be rewarded for your hard work. We offer Members the ability to earn points through everyday business activities.

Redeem anytime

Nutrien Rewards program offers real time redemptions meaning you can redeem anytime.

Delivered to your door

Rewards will be delivered to you directly with postage and handling included Australia-wide.

Reward yourself sooner

Points + Pay gives you flexibility to turn your points into rewards sooner. You simply choose how many Nutrien Rewards points you would like to redeem and pay the remainder with your credit card.

Monthly points tracker

We've made it simple to track your points with monthly updates sent directly to your inbox. From time to time we'll send you bonus and exclusive offers.

Find out how to start earning today by visiting: NutrienRewards.com.au/HowItWorks

Treat your tankwater with **Acquasafe**

CELEBRATING
90
Years of
DAVEY

THE PUREST DROP

Everyone knows that safe, clean water is essential – more and more we are starting to take a closer look at what we can do to improve the water quality in our homes, on our properties and in our businesses.

While the municipal water supply in Australia and New Zealand is generally high quality by global standards, consumers and business customers can still have issues with water that is hard, or impacted by industry in surrounding areas, or that simply doesn't taste good.

Davey offers an excellent range of water treatment products suited to small domestic through to major commercial applications.

WHY INVEST IN WATER TREATMENT?

For water tanks

As water is collected from rooflines and fed into rainwater tanks, it can collect sediment, bacteria and viruses.

For most customers, the best solution is two-stage filtration plus UV treatment. Two-stage filtration ensures the UV can penetrate through to any pathogens (e.g. bacteria, viruses etc.) in the water supply.

For more complicated issues including green staining due to acidic water, Davey offers solutions like pH correction. They can also offer specific filtration and sanitisation solutions for customers who find dust or spray product from surrounding industry in their tank water.

For mains water

Mains water can be tainted by many substances as it passes down the pipeline, including aluminium, lead, asbestos, pesticides, sulphur, sediment, and rust.

Davey's Microlene filters have a capacity of 30,000 litres and a life of up to three years. They are extremely cost efficient and are a great option for customers who are otherwise buying bottled water. Kits are available in underbench or benchtop formats so there is an option for both homeowners and renters.

For customers concerned about chlorine exposure or hard water, Davey's Microlene range includes whole-house solutions, too. Larger capacity carbon filters can be installed on incoming water supply to manage chlorine while Kinetico water softeners are ideal for addressing hard water, which can cause scale build up, staining and damage to appliances.

Depend on Davey.

SCAN TO EXPLORE
OUR ACQUASAFE
RANGE

MAKING THE RIGHT RECOMMENDATION

Davey's Microlene range is a selection of quality products for domestic and commercial use, including:

- Underbench and benchtop filtration systems
- Filter Cartridges suitable for tank or mains
- UV treatment
- Tank disinfectant
- Water softeners and neutralising filters
- Products can be set up to address whole-house water issues or provide clean, safe drinking water.
