Register for Digital Hub

Managing your farm's finances often happens outside of business hours and it can be difficult to find the time to visit your local Nutrien Ag Solutions branch when it's most convenient for you.

The benefits of Digital Hub:

- Access to your account(s), NPay, invoices and statements all in one place
- Easily make payments via direct debit or credit card
- View individual transactions (at line-item level)
- View and print invoices and statements (including livestock invoices and account sales)
- Transaction categorisation at individual line-item level
- Stay up to date with weekly market commentaries and fortnightly weather reports
- You can easily see what you owe and when

A word of thanks from Kelly Freeman

As 2024 draws to a close, it's timely to reflect on what has been another exciting year in Australian agriculture. Dry conditions in some regions, unexpectedly wet seasons in others, the live sheep export ban and ongoing rising cost of inputs have put pressure on our industry; but we've seen plenty of positives too. Recovering livestock prices, stability in the global trade environment and solid winter growing conditions have provided welcome relief across the sector, and the outlook is strong for another successful year ahead.

We're privileged to partner with you through the ups and downs of farming; and we're always looking at opportunities to help you achieve success. We know you have a choice in your product and service providers, so the Nutrien Rewards Program is our way of saying thank you for your continued loyalty and support.

In the lead up to Christmas, now is a great time to explore the range of rewards on offer. Whether it is something to support your farm business, family, lifestyle, or to pass it forward by making a donation to one of our selected charities, there is plenty to choose from.

On behalf of the entire Nutrien Ag Solutions team, thank you for your ongoing partnership and support. I hope you and your loved ones have a restful and safe summer and Christmas season; and we look forward to working with you again in 2025!

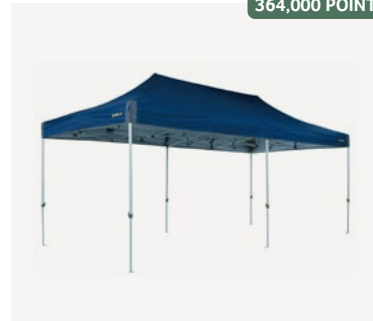

Kelly Freeman

METHOD[®]
240SL

The power to reclaim grazing land is in your hands

Method 240SL[®] Herbicide delivers a reliable alternative to manage undesirable brush and woody weeds giving land owners and conservation groups the opportunity to restore grazing land.

- + New active ingredient to the Australian market
- + Non-scheduled herbicide
- + A control solution that is both powerful & flexible

METHOD 240SL HERBICIDE

A NEW TOOL IN THE TOOL KIT IN THE FIGHT AGAINST WOODY WEEDS

Since its launch in mid 2023, **Method[®] 240SL** herbicide has been making waves in the Australian agricultural landscape, offering unparalleled control of invasive woody weed

Since its launch in mid 2023, **Method[®] 240SL** herbicide from Envu has been making waves in the Australian agricultural landscape, offering unparalleled control of invasive woody weeds. Developed with a unique active ingredient, aminocyclopyrachlor (ACP), Method continues to impress landholders with its effectiveness and versatility.

Stephanie Larkin, National Sales Manager, Vegetation Management at Envu, reflects on Method's journey since its introduction, highlighting its application flexibility and substantial systemic activity standout features. "Method's diverse application options have empowered farmers and graziers to combat multiple species of weeds with ease," says Stephanie, emphasizing its broad use pattern and efficacy on tough species like Acacia.

Method 240SL Herbicide Demonstration Review.

Trials conducted in collaboration with Desert Channels Queensland prior to launch yielded fantastic results, validating Method's efficacy and cost-effectiveness. Sheldon Navie, Principal Scientist at the IVM Group, shares insights from these trials, where Method demonstrated superior performance compared to existing products. Notably, trees treated with Method showed complete mortality, signalling a significant breakthrough in weed control efforts.

Regional Australia Woody Weeds.

Errol Entriken, property manager from Sesbania, echoed the sentiment of optimism surrounding Method's performance, expressing excitement over the herbicide's potential to deliver more effective and long-lasting results compared to the current standard chemical applications.

Method's formulation as a soluble liquid (SL) and its water-based composition have also garnered praise for their user friendliness and lack of strong solvents. Furthermore, its ability to target different sites than existing chemistry helps combat resistance in weed species, ensuring sustainable weed management practices.

Since the product went live to market, feedback on Method has been overwhelmingly positive, with landholders praising its quick and tangible results. "This is a big win for agriculture and natural restoration in Australia," remarks Stephanie, highlighting the significance of introducing new active ingredients to address ongoing challenges in weed control.

As Method continues to gain traction, the Envu Rural Team remains committed to supporting industry stakeholders across Australia. With its expanded availability and proven track record, Method 240SL stands as a beacon of hope in the ongoing battle against woody weeds, promising a brighter future for Australian landscapes.

DAVEY
DynaDrive™

COMPACT ALL-IN-ONE CONSTANT PRESSURE SYSTEM

FEATURES & BENEFITS

Flows up to 140L/min and heads up to 64m

Horizontal multistage centrifugal pump with all hydraulic parts in stainless steel:

- Suitable for high water temperatures
- Corrosion and wear resistant
- Compact design
- Easy to install

Stainless steel impellers with high efficiency impeller profile and thick self-centring impeller neck rings for:

- High efficiency
- Reduced power consumption:
- Low noise output

Air purging valve and stage porting:

- Easier priming
- Less susceptible to air leaks
- Improved dependability

Impellers mounted directly on extended motor shaft:

- Maximise performance per stage
- High efficiency
- Long motor and pump life
- Increased wear resistance

Model Numbers:
DD60-10(CE), DD90-11(CE)

GUARANTEE
2 YEARS

APPLICATIONS

Ideal for household and domestic water supply, farming and agricultural water systems, irrigation and turf watering systems and automatic general water transfer.

Tested in accordance with
AS/NZS 4020
For use in contact with safe drinking water

CELEBRATING
90
Years of
DAVEY

Pump casing assembly attached to motor bracket at 8 points with o-ring seal:

- Complete stainless casing
- Better sealing
- Longer service life

Davey built, totally enclosed fan cooled (TEFC) electric motor:

- Sealed and greased for life motor bearings
- Oversized drive end bearing
- Longer life
- Easy service
- Economical & quiet running

CONTROLLER

- Warning indication for system faults
- Adjustable pressure settings
- Constant pressure at high flow rates
- Loss of prime protection
- Capable of daisy chain applications of two pumps in parallel
- Easy service
- Economical and quiet running

UTRISHA® N

EXTENSIVE GROWER TRIALS OF UTRISHA® N
SHOW YIELD GAINS FROM SUPPLEMENTAL NITROGEN

A South Australian farmer who trialled the new biostimulant Utrisha® N on a potato crop has reported a yield increase of two tonnes per hectare, underlining the results of numerous grower trials of the unique plant health product across the country.

Utrisha N contains a unique bacterium (Methylobacterium symbioticum SB23) that converts atmospheric nitrogen into a form the plant can utilise. It needs to be applied just once, by foliar spray, to provide a continuous supply of nitrogen all season long.

During the trial, Utrisha N was applied at a rate of 333g/ha about two months after planting when the crop was at approximately 50% row closure.

Mr Smith said while there were no obvious signs during the season, the results were clear when the harvester went in. The trial reported a 2.8% yield increase from 74t/ha to 76t/ha, which equated to at least a 25-times return on investment from Utrisha N.

Henry Smith, Nutrien Ag Solutions, Mount Gambier and Scott Merrett, Legacy Farm, Penola.

In Queensland's Lockyer Valley, a trial in organic potatoes involved using Utrisha N in conjunction with a standard organic fertiliser program of organic soil ameliorants. Utrisha N is certified by OMRI and Australian Certified Organic for use in organic crop production. Potato yield increased by 8.3% compared to the standard organic fertiliser program, with more uniform tuber set and sizing, increasing marketable yield.

Onions on left - 2 months after treatment with Utrisha N, right untreated.

Strong results were also reported from an onion trial site in the Lockyer Valley. Utrisha N was applied at the four-to-six leaf stage in conjunction with a standard fertiliser program of preplant NPK blend, followed by in-crop soluble potassium nitrate and micronutrient program.

Brown onion yield increased by 22.5% and red onion by 10%, compared to onions subject to the standard fertiliser program.

At Stanthorpe, a grower trial in wombok returned an increase yield of 9% compared to a standard fertiliser program when 333g/ha of Utrisha N was applied at the four-leaf stage and in conjunction with a standard fertiliser program.

Corteva Agriscience Plant Health Manager, Dan Cornally, said with grower trials completed in many other horticulture and broadacre crops, Utrisha N offered a new nitrogen management strategy for growers.

"Utrisha N converts aerial nitrogen to ammonium and when applied at the appropriate growth stage will supply supplementary nitrogen to the crop. We have seen excellent results in both yield and quality when Utrisha N is added to a grower's program".

For further information about Utrisha N, visit the Corteva website.

CAREFLIGHT

NUTRIEN AG SOLUTIONS
EMERGENCY TRAUMA TRAINING,
COMING TO A BRANCH NEAR YOU IN 2025

Every minute counts at a traumatic incident, and those minutes are even more precious when medical services are hundreds of kilometres away in rural and regional Australia.

That's why Nutrien Ag Solutions is excited to bring free Emergency Trauma Training back to rural Australia again in 2025.

Powered by CareFlight and delivered by clinical professionals, the one day, free workshop provides participants with the skills and confidence to deliver life-saving assistance in an emergency trauma situation. The courses are a hands on mix of theoretical and simulation

trauma response training and build knowledge, skills and confidence to improve long-term patient outcomes.

In 2025 there will be **over 70 workshops** held all across rural and regional Australia. Contact your local branch manager to find out if there is a workshop coming to your community.

Pictured: Participants in Tully, QLD, take part in Emergency Trauma Training.

VIC11041

OUTRIGHT 770

MAKES HARD WORK EASY

OUTRIGHT 770 Spray Adjuvant, a groundbreaking product designed to simplify and enhance the herbicide application process for farmers. This innovative solution combines three essential components—ammonium sulphate, penetrating oil, and non-ionic surfactants—into one convenient pack, providing superior weed control with minimal effort.

VICCHEM understands that farming is hard, but managing herbicide applications doesn't have to be. VICCHEM's **OUTRIGHT 770** is engineered to help farmers achieve effective weed control, even in the toughest conditions. Its unique formulation ensures that herbicides perform at their best, saving time and maximizing results.

OUTRIGHT 770 - One Pack. Three Punches.

Key Features of OUTRIGHT 770:

1. Penetrating Oil:

The first key component is the HASTEN penetrating oil, which aids in the uptake of lipophilic (fat-loving) herbicides. This oil helps herbicides breach the waxy surfaces of weeds, allowing for better absorption and more effective weed control.

2. Non-Ionic Surfactants:

The second component consists of non-ionic surfactants that improve the spread and adhesion of hydrophilic (water-loving) herbicides on weed surfaces. This ensures that spray droplets stick to weeds and spread evenly, enhancing herbicide uptake and coverage.

3. Ammonium Sulphate:

The third essential component is ammonium sulphate, which conditions hard water by tackling minerals like calcium and magnesium. This ensures that herbicides remain potent and effective, even in challenging water conditions.

OUTRIGHT 770 Spray Adjuvant eliminates the need for multiple products, combining everything farmers need into one easy-to-use pack. By boosting herbicide performance, it provides consistent and reliable weed control, making summer knockdowns more efficient.

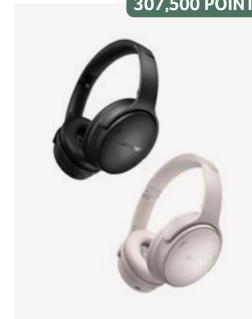

"We understand the challenges that farmers face, and we're committed to providing solutions that make their work easier and more effective," said Bill Dowdle, CEO of VICCHEM. "With OUTRIGHT 770, we've created a product that delivers powerful results while simplifying the herbicide application process."

OUTRIGHT 770 Spray Adjuvant is now available at Nutrien Ag Solutions. For more information, visit OUTRIGHT770.COM.AU or contact your local Nutrien Ag Solution store.

Available from your local Nutrien store.

DROPZONE

UPGRADE TO AUSTRALIA'S MOST EFFECTIVE 2,4-D

Nufarm continues to lead the world in 2,4-D technology with Nufarm *DROPZONE*. The result of 10 years of research and development, *DROPZONE* is a faster, more efficacious 2,4-D amine with a world-first innovative formulation.

DROPZONE is the next 2,4-D amine formulation post-Amicide Advance 700, which has become the benchmark in 2,4-D for Australian growers. With its unique formulation, droplet optimisation and low odour, it delivers all the benefits of a highly efficacious 2,4-D product, with none of the drawbacks.

Mick Sparnon - Nutrien Ag Solutions.

Unique Formulation

Improved droplet retention results in better efficacy and faster brownout.

Field testing has placed *DROPZONE* at the front of the market for speed and efficacy. Nufarm compared activity against other amine 2,4-D formulations and *DROPZONE* delivered faster brownout and had up to 10% improved efficacy, even on problem weeds like sow thistle.

Mick Sparnon, Agronomist and Branch Manager at Nutrien Pinaroo and Loxton says the results speak for themselves "We're obviously in a low rainfall area, so we are very moisture conservation minded. And on a normal summer we would do two to two and a half Summer sprays a year to keep our paddock clean and on a dry one it's down to one and a half. Our first spray application is important, and so when you get a great product that increases the efficacy of the replacement (Amicide Advance 700) but also the tank mix partners, our first spray is critical. We had great results, it controlled sow thistle and skeleton weeds are probably the main ones."

Droplet Optimisation

Spray and stay on your target with the right sized droplets for better control and less drift.

The key factor in *DROPZONE*'s performance is Nufarm's unique droplet optimisation formulation. Growers often opt for a larger spray quality or use drift-reducing adjuvants to reduce drift in 2,4-D products, both of which create larger droplets and reduce coverage. *DROPZONE*'s new technology means that it delivers up to 96% of spray volume in the ideal droplet size zone – between 150 and 720 microns – which gives excellent coverage and efficacy, while reducing the potential for drift.

Low Odour 2,4-D

Enhance your application experience with our new low odour formulation.

Minimising the characteristic odour of 2,4-D products is another key benefit of the *DROPZONE* formulation.

"I've had one customer, he farms next to...the irrigation settlement at Loxton," said Mick "for him it was just another bit of positive to actually use a 2,4-D product and not have the smell and odour."

Australian Through & Through

Developed in Australia for Australian growers.

Nufarm has invested significant resources and over 10 years into developing *DROPZONE*, which is another demonstration of its continued 2,4-D stewardship for Australian agriculture and commitment to Australian growers.

That's why I grow **Nuseed**

Seed varieties backed by a world-leading breeding program.

The breeding team at our Nuseed Innovation Centre in Horsham and in the field are constantly working on new and better varieties to perform for Australian growers, and more importantly that are bred for Australian conditions.

That's how we offer #ValueBeyondYield

POD SHATTER TESTING FOR POD SHATTER TOLERANCE

Pod shatter is a longstanding challenge for canola growers, causing yield losses at harvest lowering grower profitability.

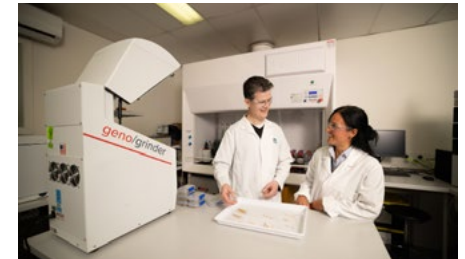

Varietal selection is one of the simpler and easier decisions a grower makes but plays a pivotal role in guiding growers toward optimal crop choices and management practices. However, to this point, the comparison of varieties for pod shatter resistance has been difficult as there has been no standard test used across canola breeding companies.

In order to select canola varieties with the best tolerance, seed breeders need an accurate, consistent and repeatable test that is able to discriminate effectively between varieties with differing degrees of shatter tolerance.

Nuseed's scientists have developed a random impact-based testing methodology to help growers and their advisors compare canola varieties on their relative levels of pod shatter tolerance.

The Methodology:

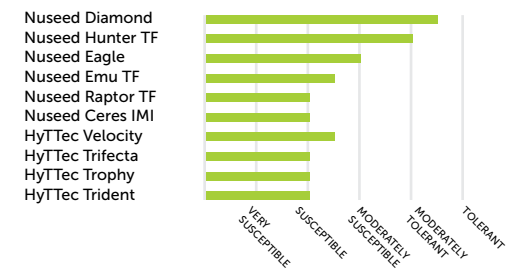

1. 20 pods are harvested from a mature canola plant.
2. Pods are pre-conditioned in an oven at 40° for 24 hours to standardise their moisture content.
3. Pods are placed in a plastic container.
4. 6 containers at a time are loaded in the Geno/Grinder®.
5. Pods are shaken in a vertical up-down motion at 1000 RPM for 30, 60 and 90 seconds with shatter scoring after each time interval.
6. Each 20-pod sample is scored according to the amount of seed loss that occurs after each time period.
7. These scores are translated into a rating scale from Susceptible to Tolerant.

Test pods are loaded into the Geno/Grinder® to compare varieties.

Through rigorous testing of this methodology, the scientists at Nuseed have developed an improved laboratory-based method for pod shatter tolerance classification that is higher throughput than the more labour-intensive lab-based methods and delivers reliable data with a high degree of accuracy and reproducibility.

Nuseed's current commercial portfolio ratings from our latest testing are as follows:

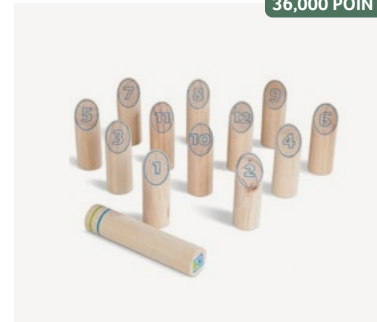

Learn more about the Random Impact Based Test and hear from the Nuseed scientists who developed it online.
